EXPERIENCE

- SellWizr** New York, NY
Software Engineering Intern 07/2025 – 08/2025
 - Engineered an asynchronous Python web-scraping pipeline (BeautifulSoup, Requests) with resilient retry/backoff, parsing 150+ profiles/hour at about 95% extraction accuracy.
 - Architected an AWS pipeline using AWS Step Functions to process 10,000 daily requests, handling approx. 2GB of raw data per day for downstream analytics.
 - Integrated CloudWatch monitoring and auto-scaling policies, ensuring system stability during peak load times of 300+ concurrent requests
- Rochester Institute of Technology** Rochester, NY
Graduate Assistant 01/2024 – 05/2025
 - Automated previously manual data-collection workflows with Python and AWS Lambda and AWS Event Bridge, reducing turnaround time from 10 hours to less than 3 hours .
 - Reverse-engineered 6,000 WeChat mini-apps, then built Python-based automated API tracing to surface malicious behaviors impacting thousands of users.
- Zenture IT** Pune, India
Lead Software Engineer 08/2022 – 07/2023
 - Led a 5-person cross-functional team to migrate an LSI model from EC2 to AWS Bedrock, reducing infrastructure costs and saving \$6K annually.
 - Improved platform security by implementing RBAC and enforcing authorization across Django API endpoints and Next.js Higher-Order Components, reducing access-control gaps.
 - Built and trained a custom NER + text classification pipeline using Python/NLTK on text extracted from 5,000+ images, achieving 96% model accuracy and improving proper-noun extraction.
- Concordia University** Montreal, Canada
Machine Learning Researcher 05/2022 – 08/2022
 - Optimized ULP deep-learning models using TensorFlow/Keras, improving accuracy by 25% on a multilingual test dataset.
 - Built and ran an ML evaluation pipeline using scikit-learn and cross-validation, processing 12M+ log entries and reducing compute cost by 82%.
- Innodel Technologies Pvt. Ltd.** Ahmedabad, India
Software Engineer 01/2021 – 04/2022
 - Improved customer experience metrics by 80% by building and shipping real-time payment analytics dashboards that accelerated issue resolution and optimized conversion outcomes.
 - Increased checkout success rates and cross-platform adoption by architecting and integrating UPI, Apple Pay, Google Pay, and digital wallet flows into the core payment infrastructure.
 - Reduced software defects by 75% and backend processing latency by 45% by partnering with DevOps to implement CI/CD automation and microservice performance optimizations.

ACADEMIC PROJECTS

- Mod-Your-Tex** Built a LaTeX resume-tailoring web app (**Next.js, FastAPI, OpenAI, Tectonic**) that ingests user's .tex from a text area, optimizes it against the JD, compiles to PDF, and returns a direct download. Implemented input validation, structured error logging, basic auth, rate limiting, accessibility checks, CI/CD to **Vercel/Render**, and mock-based tests for reliability.
- InMailer** Built and deployed a web-based email outreach automation platform (**React, Flask, PostgreSQL**) enabling 5K–15K personalized emails/day with atleast 95% delivery success, scaling campaigns 10× faster while sustaining 200–500 Daily users under free-tier infra.
- Real-time Kafka Data Pipeline:** Built a robust scalable real-time messaging pipeline using **GoLang, Kafka, and Docker Compose**, ensuring structured JSON data streaming and efficient inter-service communication, significantly improving data processing reliability
- Rideshare App:** Engineered a rideshare platform using **Django, and PostgreSQL** incorporating geolocation APIs using **NodeJS**. Sketched the API' calls between the client/server using **Flask**

EDUCATION

- Rochester Institute of Technology** Rochester, NY, USA
Master of Science in Software Engineering 3.4
Relevant Courses: *Software Architecture, Software Construction, Database Design, Data Analytics, Collaborative Software Development, Software Quality Assurance, Visual Analytics*

SKILLS

- Languages** Python, Java, Go, JavaScript, TypeScript, C++, SQL
- Frameworks** React, Next.js, Node.js, Express, Django, Flask, FastAPI, Spring Boot, Oracle Apex
- AI/ML** PyTorch, TensorFlow, scikit-learn, Seaborn
- Datastores** PostgreSQL, MongoDB, Amazon DynamoDB, Kafka, Tableau
- DevOps** AWS, Docker, CI/CD, JaCoCo, Git, Linux
